FINAL PROJECT CS-554

NAME: FEEDBACK MACHINE

Installation steps:

1. To install all the modules plus dependencies, implement the following command

2. "npm install" in the root folder (Path: /npm install)

3. Then go to the client folder using "cd client" and install the packages used for client side using the same command "npm install"
   (From '/',
   type 'cd client'
   Then you will be in the directory '/client'
   From the client directory('/client'), type 'npm install')

4. Then we need to build the client side. Giving the client folder path implement the command "npm run build"
   (From the client directory('/client'), type 'npm run build')

5. To run the project, go to the root folder and run "npm run dev"
   (Go back to the root directory '/' from the client directory '/client',
   And from the root directory '/', type 'npm run dev')

6. Application will get run over the path - https://localhost:3000/
